Mahalo to the agencies and individuals who contributed their time, expertise, gifts for persons experiencing homelessness, and other resources to conduct the 2013 Statewide Homeless Point-in-Time Count (PIT). The City & County of Honolulu and the Department of Human Services would like to recognize the following persons, organizations, and public and private agencies for participating in this project:

Partners in Care Point in Time Planning Members

- Gabriel Naeole – City & County of Honolulu, Department of Community Services
- Lori Tshako – State of Hawaii, Department of Human Services, Homeless Programs Office
- Paul Oshiro – Waikiki Health Center
- Tien Lum – Hybrid International, LLC
- Carlos Peraro – C. Peraro Consulting, LLC

Partners in Care is a coalition of representatives on Oahu and Bridging the Gap a coalition representing the rural counties. Both coalitions include service providers, state and local government, community groups, and homeless and formerly homeless individuals that are providing a comprehensive collaborative response to the diverse needs of individuals and families experiencing homelessness.

Bridging the Gap Point in Time Planning Members

- Rita Sandi-Palma, Chair – Community Alliance Partners (Big Island CoC)
- Jeremy McComber – HOPE Services Hawaii
- Debra deLuis, Chair – Kauai Community Alliance (Kauai CoC)
- Sharon Woodward– Kauai Housing Agency
- Maude Cumming, Chair – Maui Homeless Alliance (Maui CoC)
- Jan Shishido and Tina Krau – Maui County Department of Housing and Human Concerns

Thank you to the numerous individuals and agencies donating gifts for persons and families experiencing homelessness that were distributed during the Point-in-Time Count and to the many volunteers that helped coordinate and carry out the interviews and count.

Background and Project Overview

The U.S. Department of Housing and Urban Development’s (HUD) annual grant application for Continuum of Care (CoC) Homeless Assistance Programs funding requires the Honolulu and Balance of State Continua to produce “statistically reliable, unduplicated counts or estimates of homeless persons in sheltered and unsheltered locations on a one-day point in time.” The 2013 Statewide PIT Count date was January 22nd, 2013.

The City & County of Honolulu, Department of Community Services (DCS), the State of Hawaii, Department of Human Services (DHS), Homeless Programs Office, Bridging the Gap CoC, and Partners in Care CoC collaborated to develop the methodology for the count and worked diligently with homeless service providers to plan the logistics and develop the survey instruments in accordance with HUD’s guidelines.

Objectives

The objective of the 2013 PIT Count was to obtain an accurate estimate of Oahu’s sheltered and unsheltered homeless populations on January 22, 2013 in conjunction with:

- Obtaining an overall count of homeless individuals and households in specific subpopulations in the City & County of Honolulu;
- Obtaining an estimate of the number of homeless singles and persons in households with children;
- Obtaining an estimate of the number of chronically homeless individuals and families according to HUD’s definition of “chronically homeless.”

As in the 2012 PIT Count, the State of Hawaii Homeless Management Information System (HMIS) was utilized to extract data for both the sheltered and unsheltered counts. The HMIS is a statewide database that was established in 2002 for recording homeless client and service data in an accurate and uniform manner in order to track program outputs and outcomes for reporting and funding purposes. All homeless service providers receiving funding at the federal, state, or local level are required to participate in the HMIS. Some privately funded agencies voluntarily use the HMIS, which is highly encouraged.

The City received HUD’s permission to deviate from the conventional one-night unsheltered PIT Count methodology and to instead conduct a seven-day physical count from Wednesday, January 23, 2013 to Tuesday, January 29, 2013. These dates fell within the last ten days of January 2013 as mandated by HUD. All unsheltered persons encountered by field staff were asked “Where did you sleep this past Tuesday, January 22nd?” as well as other survey questions.

The unsheltered homeless count used survey instruments based on criteria from HUD’s Guide to Counting Unsheltered Homeless for use by field staff to document unsheltered responses. The surveys for unsheltered persons on the night of January 22, 2013 were entered into the PIT Count module of the HMIS, which has response fields for all of the survey questions. The surveyed participant’s name was first queried in the HMIS to determine whether the person had ever been entered into the HMIS database. Surveyed respondents in the HMIS had some of their
demographic information populated by corresponding response fields to streamline the data entry process. Staff performing data entry had the opportunity to edit the populated fields if the information was not current. After all surveys were entered into the PIT module, the data were analyzed to obtain the statistics needed by HUD and referenced in this report.

The following unsheltered encounters were not included in the unsheltered homeless count: 1) persons who stated that they had been sheltered on the night of January 22, 2013, 2) persons who were approached to complete a survey, but indicated that they had already been surveyed and 3) persons who did not indicate where they had slept on January 22, 2013. A relatively small number of unknown/refused surveys were omitted to account for duplication. These numbers are presented in Exhibits 14A-D.

The vast majority of sheltered homeless statistics were derived from HMIS client and intake data in the sheltered programs section of the HMIS. Emergency, transitional, and safe haven housing programs were contacted prior to the 22nd and instructed that all clients sleeping in their facility on the night of the count needed to have active intakes in the HMIS. Agencies were advised to make sure that all client data were current so that subpopulation data could be as reliable as possible. Follow-up with specific service providers was also conducted to verify that HMIS listings matched the nightly census. Shelters not participating in the HMIS (such as domestic violence shelters) were contacted individually to provide the number of homeless individuals and families residing at their shelters on the night of the count, in addition to providing specific subpopulation data.

PIT Count planning meetings were conducted prior to the night of the count and were attended by staff from HUD, DCS, DHS, PIT Team Coordinators; homeless service providers, and interested PIC members. The purpose of these meetings was to refine the count’s methodology, provide instructions, and obtain feedback regarding the survey instruments used for the unsheltered counts. The survey instruments are attached as appendices five and six.

Separate trainings took place for field staff conducting the unsheltered PIT. These trainings provided an overview of the purpose and methodology for the PIT, safety tips, recommended materials to bring during the field work, and practice regarding the use of the survey instruments. Additionally, PIT Team Coordinators provided training in the field before the count to ensure that all volunteers understood how to use the survey. The unsheltered PIT materials provided to surveyors are displayed in appendices seven and eight.

**Point-in-Time Count Teams**

PIT teams were composed of outreach workers from service agencies that regularly perform outreach to unsheltered individuals and families experiencing homelessness. Teams were assigned to a region where they regularly provide outreach services so field staff could use their familiarity with the region to ensure all of the areas frequented by unsheltered homeless populations were surveyed. Because outreach workers had already established rapport with many of the consumers they encountered, consumers were more likely to participate in the surveys and provide accurate information. Feeding programs were also covered during the PIT to reach additional unsheltered persons.
Oahu Regions:
1. Downtown Honolulu: Salt Lake to Piikoi Street;
2. East Honolulu: Piikoi Street to Hawaii Kai, including Waikiki;
3. Ewa: Aiea to Kapolei;
4. Kaneohe to Waimanalo;
5. Wahiawa to North Shore;
6. Upper Windward: Kahaluu to Kahuku; and
7. Waianae Coast.

Maui Regions:
1. Central Maui
2. Lower Waiehu
3. Up Country
4. Lahaina
5. Kihei
6. Hana

Kauai Regions:
1. West
2. South
3. South Central
4. East
5. North

Hawaii Regions:
1. Kohala
2. Honokaa
3. Laupahoehoe
4. Hilo
5. Waiakea
6. Keaau
7. Pahoa
8. Kau
9. Konawaena
10. Kealakehe

Implementation

The sheltered count was conducted on the evening of Tuesday January 22\textsuperscript{nd} and the unsheltered from January 23\textsuperscript{rd} until the 29\textsuperscript{th}. A “Super Wednesday” unsheltered count was conducted with all participating agencies on the 23\textsuperscript{rd}, aimed at reaching as many unsheltered persons as possible. For the subsequent six days of the unsheltered count, each outreach agency independently scheduled days and times when field staff would visit known sites, balancing safety with timing in an effort to maximize the number of unsheltered persons counted.
While the 2005 and 2007 PIT Counts used a sampling method to survey the encountered homeless, the 2009 through 2013 HMIS PIT Count Methodology required that all unsheltered persons identified be asked to complete a survey. Service providers agreed this was the best way to get an accurate count of homeless persons and an improved chronically homeless and subpopulation tally. This also allowed field staff to obtain identifying info for each person being counted so that the surveyed could be unduplicated. Unduplicating the data is important to ensure clients or families that mistakenly appear multiple times in the counts are only counted once. The duration of the count was increased so that outreach teams would be able to survey each person encountered and to give field staff more time to reach as many unsheltered persons as possible.
Overview for 2013

On January 22, 2013 the Honolulu and Balance of State CoC conducted a one-day sheltered count of homeless persons on Oahu and the rural counties of Maui, Kauai, and Hawaii. The sheltered count preceded a seven-day unsheltered count of homeless persons that took place from January 23rd to the 29th, and spanned the islands of Oahu, Maui, Kauai, and Hawaii.

Exhibit 1A summarizes the Oahu count. The sheltered count included persons staying in emergency, transitional, or safe haven programs. The total number of homeless on the island of Oahu was estimated to be 4,556. There were 3,091 sheltered homeless and 1,465 unsheltered homeless, representing 68% and 32% of the homeless population respectively. Individuals were defined to be singles or adult households. 29% of the sheltered were individuals, while the remaining 71% were persons in families. Persons in families were defined as members of a household with at least one adult and one child under the age of 18. 88% of the unsheltered were individuals while 12% were persons in families. Sheltered homeless on Oahu comprised 68% of the total homeless, while unsheltered persons roughly 32%. The ratio of sheltered family households to unsheltered family households was just over 12:1.

Exhibit 1B summarizes the rural county homeless composition. The total number of homeless was estimated to be 1,779, which declined 6% from the prior year. Sheltered homeless represented 37% of the total, while unsheltered comprised 63%. These figures are a stark contrast from the percentages of Oahu’s sheltered and unsheltered homeless. 37% of the sheltered were individuals, while the remaining 63% were persons in families. The proportion of individuals who were sheltered was eight points higher than Oahu. 82% of the unsheltered were individuals while 18% were persons in families. The proportion of unsheltered homeless that were persons in families for the rural counties was 6% higher than that of Oahu.

</table>
The number of sheltered homeless on Oahu has risen each of the last five years. From 2012 to 2013 Oahu’s sheltered programs saw a 2% increase in the total number of sheltered homeless. When comparing the 2011 to 2013 sheltered counts, the percentage increase was 6%. Over the four-year period from 2010 to 2013, the percentage change was 11%.

Maui was the only rural county that saw an increase (0.2%) in the total number of homeless from 2012 to 2013. Kauai and Hawaii both realized large decreases in the total number of homeless. Sheltered utilization rates for Oahu and the rural counties are presented in Appendix 1. The transitional and emergency program occupancy rates for the rural counties were significantly lower than Oahu for the night of the count. All islands should strive to have their sheltered programs operating at or near capacity, especially transitional housing programs.

Figure 1 denotes the total homelessness by island over the last five years. Total homelessness has risen on Oahu each year, while the totals for the rural counties have fluctuated over the five year period.
Statewide Sheltered Homeless Counts

The table below is similar to Exhibits 2A-D above; however, focuses on filtering the sheltered row of the aforementioned tables. The statewide sheltered figure increased slightly when compared to 2012, while Kauai and Hawaii saw decreases in there sheltered occupancy on the night of the 22nd. Hawaii has shown a continuous decline in the total number of sheltered homeless over the five-year period. Oahu is trending positively, while Maui and Kauai show fluctuations from year to year. Statewide shelter utilization demonstrates steady increases over the last five years. The statewide sheltered homeless total was 3,745 people, with Oahu contributing to 83% of the total. Persons in families continue to comprise a high percentage of the sheltered total, averaging just below 71% over the last five years.

Sheltered Homeless Demographic Characteristics

Exhibit 4A presents various demographic data for HMIS participating adult individuals in emergency, transitional, and safe haven programs on Oahu. The emergency data is taken from a sample of 370 adult individuals; transitional data is taken from a sample of 409, and safe haven data is taken from a sample of 25. The non-HMIS data are excluded from the table below as the manual survey does not ask for the demographic data presented below. The Homeless Utilization Report produced by the University of Hawaii gives a much broader demographic profile of sheltered homeless over an entire year.

The Homeless Service Utilization Report analyzes HMIS data and presents demographic information about people who are receiving homeless services funded through government contracts. The report is prepared by the Center on the Family at the University of Hawaii in conjunction with the Homeless Programs Office of the Hawaii Department of Human Services (DHS). It can be downloaded from the site: http://uhfamily.hawaii.edu/

Exhibit 4B presents demographic data for HMIS participating adult individuals in emergency and transitional programs on the rural counties. Adults in families are not included in exhibits 4A-B. The emergency and transitional demographic data is gathered from 114 and 111 adult individuals respectively. The non-HMIS survey data are excluded from the table below as the manual survey does not ask for the demographic data presented below.

Homeless Subpopulations

PIT count data also provides estimates for various subpopulations. In 2013, the Honolulu CoC was required to collect sheltered subpopulation information in eight different areas, and unsheltered subpopulation data in seven. These data estimated the number of homeless persons or households that had characteristics defined in Exhibit 5A below. The exhibit outlines information collected over the last five years. Some information is listed as N/A if it was not collected at the time.

For 2013, the table below reflects the total number of sheltered and unsheltered chronically homeless. The sheltered number was pulled from all unaccompanied adults in either emergency or safe haven programs. The total number equaled 187, and also includes 36 identified through manual surveys of non-HMIS participating providers. The unsheltered total of 505 was derived from the population of all unsheltered unaccompanied adults. It is important to note that unsheltered information was largely self-reported, which may account for fluctuations over previous years’ data.

A primary focus for this year’s sheltered count was to update the intake records to reflect accurate subpopulation info. This may be one of the key reasons why subpopulation data has risen in all sheltered categories. Unsheltered SMI, CSA, and HIV data was not required prior to 2013. Unsheltered unaccompanied youth data remains lacking.

Exhibit 5B contains subpopulation information related to the Balance of State CoC. Sheltered and unsheltered chronically homeless are much less than Oahu and also have a smaller pool of unaccompanied adults to draw from. Unsheltered chronically homeless rates are presented in detail in the unsheltered sections below and are also cross-tabulated in Appendix 4. Veteran homelessness totaled 160 for the rural counties, 27 sheltered and 133 unsheltered. It is important to point out that DV data are derived from sheltered data only and was not tracked via the unsheltered surveys. Annual assessments and updates to the HMIS are an integral part of determining accurate baseline rates for these measures.

*DV derived from sheltered data only
Statewide Unsheltered Homeless

The total number of unsheltered homeless was based on persons encountered during the seven-day count stating that they were unsheltered on the night of the 22nd. People included in the count were surveyed and usually provided unique identifying information that could be used to unduplicate survey records and perform other detailed analysis with unsheltered HMIS data. Persons congregating in places known to have homeless persons but who indicated that they were sheltered on the night of the count were not included in the count.

Unsheltered persons known to outreach workers but who were not present at the sites during the count were not included in the total unsheltered number. Outreach workers were also aware of persons residing in specific locations in mountains, caves, and bushes but determined based on experience that it was unsafe to reach persons in these areas. Since these persons could not be surveyed, they were not included in the count.

The 2013 summary of unsheltered homeless persons is shown in Exhibits 7A-D. The PIT estimate of unsheltered homeless on Oahu was 1,465. 170 persons were part of the 43 households with children identified during the count. The remaining 1,295 persons were either single or groups of adults (usually couples). There were 47 multi-adult households representing 102 people. The remaining 1,193 unsheltered homeless were singles.

The PIT estimates for all of the rural counties are also shown. Throughout these counties there were decreases in the number of households with children and the number of persons in these households over the last year. When comparing the last two counts, there were increases in the numbers of unsheltered individuals on the islands of Hawaii and Maui, and a decrease in Kauai.

Appendix 2 contains a detailed breakdown and demographic profile of the sheltered and unsheltered homeless for each CoC. The summary has also been submitted to HUD’s Homeless Data Exchange (HDX) as part of the annual required documentation. Household composition analysis was a function of how the household survey data was entered into the PIT module of the HMIS. It is important to survey and enter the data correctly, and also to review the survey data that has been entered into the PIT module in an effort to enhance the integrity of the reporting.

A comparison between the last four unsheltered counts is comparable in theory because the counts were performed using the same general methodology. This doesn’t preclude a disparity in numbers reported annually due to differences in resources and execution. Exhibit 8 presents the statewide data obtained during the last four unsheltered counts. Oahu increased by 11%, Maui was nearly identical to 2012, while Kauai and Hawaii decreased significantly. Overall, the statewide count rose by 70 people (2.8%).

Figure 2 on the following page displays a pie graph that outlines the total number of unsheltered enumerated throughout the state of Hawaii for 2013. Oahu had the largest proportion of unsheltered homeless (57%), followed by Maui (18%), Hawaii (15%), and Kauai (11%).
Figure 2 - 2013 Unsheltered Homeless by County
Regional Changes of Unsheltered Homelessness

A comparison of the 2011 to 2013 regional unsheltered counts is presented in exhibits 10A-D. The totals in these exhibits agree with the totals in the exhibits above, however, in the below the unsheltered totals are broken down into the regions that partitioned each of the islands. The figures following exhibits 10A-D compare the regional changes graphically.

Figure 6 below presents a one-year graphic of the unsheltered homeless on the island of Hawaii. During 2013, Hawaii elected to alter the delineation of regions – effectively increasing the regions from six to ten. Please refer to prior counts for previous years’ analysis. Regions with low turnout could most likely be grouped in the future, but it is important to illustrate this year’s delineation for evaluative purposes.
### Demographic Characteristics of the Unsheltered Adult Population

Exhibits 11A-B displays demographic characteristics of the adult unsheltered population from the 2013 count. The table is divided to reflect the difference between adult individuals and adults in families. The data also includes the unaccompanied youth from the Oahu and rural counts.

Unsheltered Chronically Homeless

Chronic homeless analysis used survey data to identify unsheltered chronically homeless individuals and families using HUD’s definitions. The estimated number of unsheltered chronically homeless individuals statewide is shown in Exhibits 12A-D. 2012 data are also presented to compare how the data has changed since the last count.

The exhibits below display the overall change in the number of chronically homeless individuals over the last two counts for each of the four islands. The denominators used in the percent chronic calculation reflect the total cohort of unsheltered singles in both years. Members of families and couples have been excluded to adhere to HUD’s definition of a chronically homeless individual. Percent changes in the 2012 and 2013 counts are also displayed in the last column of each exhibit. Figures 7-9 illustrate the percent chronic in each region.

</tbody>
</table>
The percent change in Oahu chronically homeless from 2012 to 2013 was 4.1%. Maui had a huge spike in chronically homeless, while Kauai and Hawaii realized decreases. Apparent in the data are the large percentage changes in the regional chronically homeless. Large percentage changes from 2012 to 2013 are evident in several of the tables and are almost expected in areas with small numbers of chronically homeless. It should be noted that the chronically homeless factors such as disability, mental illness, substance abuse, HIV/AIDS status, and length and number of times homeless are all self-reported.

Exhibit 13 displays aggregate chronic homeless data for the last three years. Roughly 40% of the unsheltered singles in 2013 were identified as chronic. Total chronically homeless across the state rose 2.3% when compared to 2012.

Recommendations for Future PIT Counts

Exhibits 14A-D display tables expressing the data quality for all of the adults surveyed before data was boiled down to the unsheltered totals above. The tables display the total numbers of duplicate records, records with personal identifying information, corresponding duplication rates, unknown records from each county, and unknown and sheltered records omitted from all of the above unsheltered analysis.

It is recommended that providers not enter surveys into the HMIS PIT module that they know were sheltered on the night of the count. The rate of unknown surveys should also decrease if outreach staff is accompanying volunteers and are knowledgeable with the clientele in each of the areas. Specific locations slept on the night of the count would be much more useful than responses such as car, outside, tent, streets, or beach. Coupled with improvements to the encounters survey data in the HMIS, substantial analysis can be done to capture “real time” movement of homeless persons if specific locations were denoted. Unknown/missing gender rates should be zero each year.

Effectively adding zip code locations to outreach encounter surveys in the future could enable GIS reporting and analysis by legislative district, which many appear to be interested in. This could aid in more effectively targeting outreach resources and providing services to the chronically homeless. Data quality reports exist in the unsheltered section of the HMIS to determine missing/unknown rates for many universal data element fields.

Ancillary analysis may be forthcoming utilizing past data sets to determine frequency of occurrence in each of the counts. Names of clients occurring in each of the counts could be isolated and used to identify chronic individuals. Identifying literally homeless clients with an encounter within an interval of the PIT date that did not appear in the count can also supplement the reporting and may indicate that the current methodology undercounts the total unsheltered. Providers may also find the tables in appendices three and four useful in helping to determine where large percentages of chronic individuals tend to congregate. Names and locations from the dataset for particular regions are also available if requested. Analysis can also be presented that is based on client ID’s from the PIT dataset with that of the unsheltered database.

Requiring that shelters operate close to 100% occupancy could potentially reduce the numbers of unsheltered homelessness. Providing incentives for agencies that place and retain homeless in permanent housing situations could also improve the rate of unsheltered homelessness. Altering the mix of transitional to permanent units could also effect change.

Several other recommendations include:

- **Obtaining the most current agency contact information and provide designated point of contact for each agency.** This will ensure communicating instructions and deadlines for exiting clients and updating the shelter data in the HMIS. The designated point-of-contact...
will help data analysts get questions answered more quickly and can provide troubleshooting to streamline the shelter count process.

- **Improving matching between HMIS and census counts.** Some providers are still having trouble making sure that all of their clients are in the HMIS system by the set deadline, which delays the sheltered analysis. All HMIS participating providers should be using the HMIS and not the manual survey instruments.

- **Updating homelessness and disability information in the HMIS.** This information is often entered at intake and not updated by staff as disabling and length of homeless information becomes clearer. Updating records increases the accuracy and reliability of subpopulation information.

- **Cross reference unsheltered surveys with HMIS listings to help unduplicate clients.** A number of individuals and families were deleted from the unsheltered count because they were duplicates that appeared in both the sheltered and unsheltered data. As a rule, clients appearing in both are omitted from the unsheltered count.

- **Agencies should not enter shelter surveys in the PIT section of the HMIS, which is used for counting unsheltered people.** The data was better this year than in prior years, but could still be improved as referenced in the data quality tables above. Admin personnel should go through and weed out duplicate surveys before entering into the PIT module. Hawaii had a huge amount of duplication. In some cases this cannot be avoided if multiple agencies are responsible for data entry.

- **Attempt to get more detailed survey responses.** Of extreme importance are the exact locations of the interview and the exact locations of where the client slept on the night of the count. This year’s count did a good job of getting distinct versus generic interview site responses; however, the location where the homeless persons slept was sometimes general in nature. Many times respondents reported sleeping in a car, tent, at the beach, on the streets, etc. This information becomes a key piece in the analysis because one can pinpoint the exact location of the chronically homeless on that specific night if that data is available. Surveyors did an excellent job of reporting the region numbers on the night of January 22, 2013, but it would be helpful to have more precise locations. This information could be used in a number of cross tabulations that outreach teams could use in the future to locate veterans, chronically homeless, families, unaccompanied youth, etc. Some descriptions lacked information about the respondent’s gender categorization and had to be marked as unknown.

- **Ensure there are enough appropriately trained regional coordinators.** PIT Count Coordinators improved on the execution of the count from the previous year. However, since effective coordination is imperative when carrying out an unsheltered PIT Count, it is important that enough regional coordinators are assigned to oversee specific areas and that they are aware of their roles and responsibilities to organize the field staff in their areas, provide training on completing the surveys, and to monitor coverage of sites that unsheltered persons are known to congregate.
• **Adjust surveys and training after the first day.** Screening surveys that were done on the first day of the count can provide recommendations for improvement that can be implemented during the remaining days of the count. This would assist in increasing the number of surveys providing enough data to be included in the count.

According to survey coordinators and outreach workers, the overall coordination and execution of the count improved from 2012 to 2013. This year’s count made greater efforts to cover places where unsheltered persons are known to congregate, including increasing coverage of places that serve no-cost meals, which may have contributed to more unsheltered persons counted. The implementation of a coordinated “Super Wednesday” count along with continuing the count for the rest of the week provided field staff with more opportunities to encounter unsheltered persons and to revisit sites that are known to be inhabited but may have been sparsely occupied during initial visits. Additionally, the survey instruments were improved and shortened from the previous year, which made it easier for field staff to ask and receive survey responses. The methodology used in the 2013 PIT was effective for establishing accurate data for the sheltered homeless count; and volunteers and provider staff should be commended for their ability to produce another successful count of the homeless throughout the State of Hawaii.

*Total bed capacity includes beds for households with and without children. If the actual count exceeded the total bed capacity stated on the Housing Inventory Count (HIC), the total bed capacity was adjusted to equal that of the actual count. If the actual count was less than the HIC total inventory, the total bed capacity was left unchanged. Bed capacity reflects 2012 inventory.

Appendix 5: 2013 PIT Count Household Survey

USE THIS FORM IF THE CLIENT IS PART OF A HOUSEHOLD
(For our purposes households are defined as: an adult with at least one child under 18, adult couples with no children, groups of adults, and children-only household configurations)

2013 Homeless Point-in-Time Count Survey

Interviewer’s Name: ____________________________ Agency/Group: _______________________
Site of Interview (Actual Location): ____________________________ Date: ___________

Introduction Example: “Hello, my name is _____, and I am an outreach worker/volunteer. We are doing a short survey for an annual homeless count, and your responses will help fund homeless services throughout Hawaii. All of your answers will be confidential. Can I ask you a few questions?”

“Are you living alone or with others?”
To determine whether to use SINGLE or HOUSEHOLD form

“Where did you sleep this past Tuesday, JANUARY 22nd?” _______________________
If answer is sheltered (e.g. house, shelter, hospital, jail), End Survey. Please try to be as specific as possible.

“What area of the island did you sleep?” ____________________________
Enter Area/Region # (1–7) [Map on back]

1. Including yourself, how many ADULTS are in your household? ______
2. How many CHILDREN UNDER 18 are in your household? ______
3. How long have you been continuously homeless this time?
   □ Less than 1 year □ 1 year or longer* □ Unknown □ Refused
4. How many times have you been homeless in the past 3 years?
   □ 1–3 times □ 4 or more times* □ Unknown □ Refused
5. HEAD OF HOUSEHOLD

First Name: ____________________________ Last Name: ____________________________
Date of Birth: _______ / _______/ _______ OR if DOB refused, Age: ______
Gender: □ Male □ Female □ Transgender □ Unknown/Refused
Have you served in the U.S. Armed Forces? □ Yes □ No □ Unknown □ Refused
Were you activated, into active duty, as a National Guard member or Reservist?
□ Yes □ No □ Unknown □ Refused

Do you have a mental health disability that limits your ability to work or perform activities of daily living?
□ Yes* □ No □ Unknown □ Refused
Do you have an alcohol or drug problem that limits your ability to work or perform activities of daily living?
☐ Yes* ☐ No ☐ Unknown ☐ Refused

Are you currently living with HIV/AIDS?
☐ Yes* ☐ No ☐ Unknown ☐ Refused

Do you have a physical, developmental, or other disability that limits your ability to work or perform activities of daily living?
☐ Yes* ☐ No ☐ Unknown ☐ Refused

6. OTHER ADULT IN HOUSEHOLD #1:

First Name: ___________________________ Last Name: ___________________________
Date of Birth: ______/______/_______ OR if DOB refused, Age: ____

Description:
Appendix 6: 2013 PIT Count Single Survey

USE THIS FORM IF THE CLIENT IS SINGLE (Unaccompanied)

2013 Homeless Point-in-Time Count Survey

Interviewer’s Name: ___________________________ Agency/Group: ___________________________

Site of Interview (Actual Location): ___________________________ Date: ___________________________

Introduction Example: “Hello, my name is _____, and I am an outreach worker/volunteer. We are doing a short survey for an annual homeless count, and your responses will help fund homeless services throughout Hawaii. All of your answers will be confidential. Can I ask you a few questions?”

“Are you living alone or with others?”
(If living with others including a child under 18 use HOUSEHOLD form)

“Where did you sleep this past Tuesday, JANUARY 22?” ___________________________
If answer is sheltered (e.g. house, shelter, hospital, jail), End Survey. Please try to be as specific as possible.

“What area of the island did you sleep?” ___________________________ Enter Area/Region # (1–7) [Map on back]

1. First Name: ___________________________ Last Name: ___________________________

2. Date of Birth: _______ / _______ / _______ OR if DOB refused, Age: _______

3. Gender: □ Male □ Female □ Transgender □ Unknown/Refused

4. Have you served in the U.S. Armed Forces? □ Yes □ No □ Unknown □ Refused

5. Were you activated, into active duty, as a National Guard member or Reservist?
□ Yes □ No □ Unknown □ Refused

6. How long have you been continuously homeless this time?
□ Less than 1 year □ 1 year or longer* □ Unknown □ Refused

7. How many times have you been homeless in the past 3 years?
□ 1–3 times □ 4 or more times* □ Unknown □ Refused

8. Were you on the street, beach, park, or in an emergency shelter each time?
□ Yes* □ No □ Unknown □ Refused

9. Do you have a mental health disability that limits your ability to work or perform activities of daily living?
□ Yes* □ No □ Unknown □ Refused

Description:
Appendix 7: 2013 Overview

POINT IN TIME (PIT) COUNT
January 2013 Overview

Proposed Count Dates

- **Sheltered Date for the Count is Tuesday, January 22:** Individuals and families staying in a shelter on this night will be counted. All sheltered intakes for clients residing in ES, TH, or SH programs should be entered into the HMIS by **Friday, February 8, 2013.** All Non-HMIS summary surveys for providers not participating in the HMIS (e.g. DV shelters) should be amassed for the night of the 22nd and submitted to [carlosperaro@yahoo.com](mailto:carlosperaro@yahoo.com) by February 8, 2013.

- **Unsheltered Dates for the Count are Wednesday, January 23 to Tuesday January 29.** ONLY people who responded that they DID NOT stay indoors on Tuesday January 22nd should be surveyed. If a person responds by stating that they were sheltered or stayed indoors on the 22nd, discontinue the survey and **do not enter** into the PIT module of the HMIS. Surveying should be done at a variety of times including very early in the morning and late at night. Feedings should also be utilized as sites for surveys. All unsheltered surveys should be entered into the HMIS by **Friday, February 22, 2013.**

- **Kick Off Evening is Wednesday, January 23** from 5:00 to 9:30 pm for a concentrated outreach effort to count unsheltered individuals and families and to start off the count which will continue until **Tuesday, January 29.**

Agency Assistance Needed

**Volunteers:** Any assistance with having staff, students or volunteers help with the count will be appreciated. All volunteers must be **register prior to the count.** Volunteers will be assigned to Lead Coordinators as needed. Lead Coordinators must make sure that all volunteers working in their areas are adequately trained.

**Survey Instrument:** The survey instruments will be slightly different than last year and a copy will be provided. The form for singles will be on white paper, the survey instrument for families will be on colored paper.

**Survey Instructions:** Instruction forms will be provided for Agencies, Lead Coordinators, and Surveyors

**Surveyors:** All surveyors must register prior to the Point In Time Count and must sign the Contact Information and Confidentiality Form. A sign up form for volunteers is available and will be sent out along with the Contact Information and Confidentiality Form to the PIC email list.
Surveyor Training: The training for those working the Kick Off Count will happen from 5:00 to 5:30 pm just prior to the start of the count at each of the coordinating sites. All surveyors are required to attend. All coordinators should ensure that all surveyors are properly trained before each shift.

Data Input: Data entry will be done by agencies already using the HMIS. An instruction sheet on inputting this information will be provided prior to the count. Methodology will be very similar to last year.

2013 Point In Time Count Statement of Confidentiality
Must be signed by all Surveyors

All outreach staff and volunteers associated with the collection of homeless population data during the 2013 Unsheltered Point in Time Count are subject to certain confidentiality guidelines.

These guidelines apply to all data collected during the seven day period from January 23rd – January 29th and to any data that may subsequently be entered into the HMIS from this period. The State of Hawai’i’s HMIS contains an appreciable amount of client information that must be confidentially maintained. As the administrator of the HMIS, there are several guidelines that the State of Hawaii would like to address regarding the upcoming collection of client data and the entering of this data into the HMIS for applicable outreach staff.

- All client information gathered will be held strictly confidential.
- All completed surveys will be kept out of public view.
- Personal HMIS user identifications and passwords will be kept secure and will not be shared.
- Private information obtained from the HMIS is to remain confidential, even if an employee’s job is terminated or concludes for any reason.
- Entering known, inaccurate information about any client is prohibited.

Your signature below indicates your agreement to comply with this statement of confidentiality.
